

1 TON ELECTRIC DRIVE RSW

The 1 Ton Electric Drive RSW is a compact and efficient refrigerated seawater system designed for fishermen needing reliable cooling with minimal power and water supply. Ideal for set netters, prawn and crab fishermen, high-speed offload boats, and tuna pre-chilling, this unit provides a practical and affordable solution for keeping catches fresh.

CHILL TIMES (under ideal conditions)

1 Ton Electric Drive RSW chills approx 500 lbs of water/fish from 58°F to 34°F per hour.

MARINE-GRADE BUILD	Aluminum-enclosed condensing unit for durability in harsh marine environments.
COMPACT & LIGHTWEIGHT	Slim-line, water-cooled tote chiller for space-saving installation.
VERSATILE POWER OPTIONS	Runs on 120V power and requires a minimum 3,000W generator with an inverter.
SIMPLE HOOKUPS	Works with an insulated tote and a washdown or submersible pump for condenser water supply.

TITANIUM TURBO CHILLERS

These chillers have better refrigerant control and more capacity than most standard large chillers. Each chiller is made with coiled Titanium Refrigeration Tubes, creating the "Turbo" effect as the refrigerant travels through the tubes.
